                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                           片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymcleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical company of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (C The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations composition for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed consecrification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 518;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
cc hybridisation probes, primers for PCR, for chromosome and gene mapping, cc for the recombinant production of protein, or in generation of anti-sense CR NA or RNA. The polynucleotides are useful in diagnostics as expressed CR sequence tags (ESTs) for identifying expressed genes or for physical CR mapping of the human genome. The proteins may be used as molecular weight markers, or as nutritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential or CR pluripotential state useful for re-engineering damaged or diseased CR tissues, transplantation, manufacture of bio-pharmaceuticals or the CR tissues, transplantation, manufacture of bio-pharmaceuticals or the CR protein expression or biological activity, e.g. haematopoietic disorders, CR protein expression or biological activity, e.g. haematopoietic disorders, CR disorders, non-healing wounds, immune deficiencies and disorders, infectious diseases caused by viral, bacterial or fungal infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     haematopoletic disorder; central nervous system disease; viral infection; peripheral nervous system disease; non-healing wound; infectious disease; immune deficiency; immune disorder; bacterial infection; allergy; cancer; fungal infection; autoimmune disorder; coagulation disorder; nootropic; antiallergic; antiinflammatory; immunosuppressive; neuroprotective; cytostatic; haemostatic; virucide; antibacterial; fungicide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel human coding sequences (ABQ99268-ABQ99608) and proteins (ABQ4862-ABB65022). The sequence useful in therapeutic, diagnostic and research methods. The polynucleotides may be used in the field of molecular biology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 20; SEQ ID 495; 394pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide, useful in research, diagnostic or therapeutic methods, e.g. preventing or treating disorders involving

The polynucleotide sequences of the invention were assembled from ESTs isolated mainly by sequencing by hybridisation, and in some cases, sequences obtained from one or more public databases. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPCR polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations (CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Control of the printed of the polynucle data for this patent did not appear in the printed cartification, but was obtained in electronic format directly from WIPO cart from wipo in/nub/liched not sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 20; SEQ ID No 40090; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                               This invention describes novel nucleic acid sequences (A) that are expressed at high level in prostatic tumor tissue and encode gene products or their fragments. The products of the invention have antitumor activity. Polypeptides (I) encoded by (A) are used: (i) for identifying agents for treatment of prostatic cancer and (ii) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before they are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTs. AAY40215-Y48303 represent protein fragments encoded by the expressed sequence tags described in the method of the

                                                                                                                                                                                                               expressed at high level in prostatic tumor tissue and encode gene products or their fragments. The products of the invention have antitumor activity. Polypeptides (I) encoded by (A) are used: (i) for identifying agents for treatment of prostatic cancer and (ii) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before they are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use encoded by the expressed sequence tags described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid expressed at high level in prostatic tumor tissue encoded polypeptides, useful for treating cancer and screening for therapeutic agents

                                                                                               The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                                                                                                                                                                                                 prognosticating, preven individual to diseases

```
polypeptide (see AAM50809). A PS118 consensus sequence (see AAM508151) is found at least 12 times more often in prostate than in non-prostate tissue. PS118 polypeptides, polynucleotides, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostatic intraepithelial neoplasia, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression of PS118 polynucleotides in transfected host cells, and immunogenic peptides are useful for raising PS118-specific invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the lease of energy in portant and unimportant prostate cancers
                                                                                                                                                                                                                                                                                                                                                                  Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostic preventing or treating or determining predisposition to prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PS118; prostate; marker; prostate cancer; tumour; metastasis; benign prostatic hyperplasia; prostatic intraepithelial neoplasia; prostatitis; human; diagnosis; therapy; vaccine; immunogen.

                                                                                                                                                                                               polypeptide (II) sequences. (I) is useful as hybridisation probes, comply probable (II) sequences. (II) is useful as hybridisation probes, comply probable (II) and for chromosome comply production of (II). The comply production of (II) and for chromosome comply production of (II) and in recombinant production of (II). The comply techniques comply probable (II) are also used in diagnostics as expressed sequence tags (II) are thereby techniques (II) are store normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in compositics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human the sequences of the invention.

                                                                                                        The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                                                                                                                                                                                                                  Novel PS118 polypeptide for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating, or determining predisposition of individual to diseases and conditions of prostate, e.g. prostrate

Consequence (see AMASORO). A PSIL® consensus sequence (see AMASORO). A PSIL® consensus sequence (see AMASORO) is found at least 12 times more often in prostate than in mon-prostate tissue. PSIL® polypeptides, polynucleotides, cantibodies, agonists and inhibitors are useful for detecting, it diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the prostate, such as benign prostatic hyperplasia, prostate conditions of the prostate, such as benign prostatic hyperplasia, prostate cancer, tumours and metastases. The PSIL® polypeptides can be produced by expression of PSIL® polymelectides in transfected host cells, and contibodies of diagnostic use. The methods and reagents of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers.

                                                                                                                                                                                                                          monitoring and treatment of prostate diseases, particularly proceancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated prostate tissue expressed sequence tag (EST) library.
                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                     The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection,

comprising amino acids 332-371 of human prostate specific PS118

polypeptide (see AAM50809). A PS118 consensus sequence (see
ABA91651) is found at least 12 times more often in prostate than

in non-prostate tissue. PS118 polypeptides, polynuclectides,
antibodies, agonists and inhibitors are useful for detecting,
diagnosing, staging, monitoring, prognosticating, preventing and

treating (including by genetic immunisation), or determining the
predisposition of an individual to, diseases and conditions of the

predisposition of an individual to, diseases and conditions of the

prostate, such as benign prostatic hyperplasia, prostatitis,
prostatic intraepithelial neoplasia, prostate cancer, tumours and

metastases. The PS118 polypeptides can be produced by expression

of PS118 polynucleotides in transfected host cells, and

immunogenic peptides are useful for raising PS118 specific
antibodies of diagnostic use. The methods and reagents of the

cinvention may provide an early means of detecting diseases of the

prostate and may also provide new markers which can differentiate

between the clinically important and unimportant prostate cancers
